Working at the intersection of International Relations and Greek Political Thought, Dr. Jaffe draws on his original interpretation of Thucydides’ account of the causes of war to explore arguments surrounding the ‘inevitability’ of growing conflict between the United States and China. Contrary to those who appropriate Thucydides as the original power transition theorist, he argues that the Thucydidean account in fact involves second image claims, which alter the character of the necessity (or ‘inevitability’) of conflict between rising powers and ruling ones.

Dr. Jaffe is an Assistant Professor of Political Science and International Affairs at John Cabot University and an Associate Researcher at the Berlin Thucydides Center of the Freie Universität Berlin. His book *Thucydides on the Outbreak of War: Character and Contest* is forthcoming from Oxford University Press.
